

Overview

Compress JPG and PNG images in your store with TinyPNG, reduce your store's page size, make your store load much faster and save a lot of disk space.

The benefits for merchants

- Easily compress JPG and PNG images in your store.
- Reduce images size significantly by compressing them.
- On average, JPG images are compressed by 40-60% and PNG images by 50-80% WITHOUT visible loss in quality.
- Improve customer experience with fast loading pages.
- You will save a lot of disk space on your server.
- Benefit from pause/resume feature and never worry about the number of images your store has.
- Compress images by category: product images, category images, theme images, module images and many others.
- You can also compress images from any directory. Just give absolute or relative path to a directory and the module will take care of the rest.
- View detailed history of compressions and keep track of the improvements.
- The history of each compression is kept, so that you don't compress images that were compressed before.
- Modified images will be compressed during next compressions, regardless of the history.
- View your monthly compression usage right in the module configuration page, no need to open your TinyPNG account dashboard.
- View log of images and their statuses. You can compare sizes of images before and after compression.
- You can use CRON to automatically compress images on scheduled time periods.
- Product images will be compressed automatically by CRON after you add them.
- Compress first 500 images for free every month.
- You can use different TinyPNG account after 500 images and continue with your compression free of charge.
- Please visit <https://tinypng.com/developers> for more details about pricing if you want to use single account and compress more than 500 images every month.
