**VERSION: 1.6 Y 1.5**

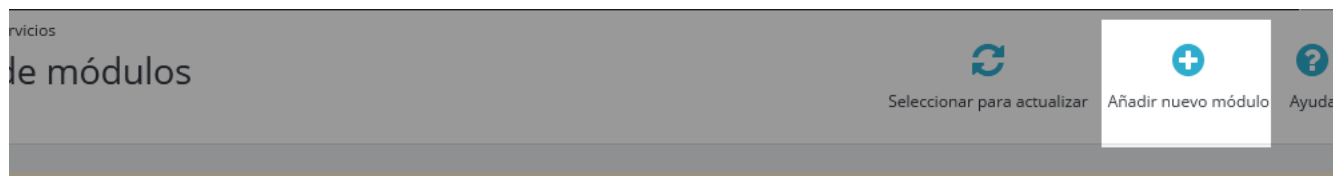

This document includes a step by step guide to install, uninstall and configure your new Innovadeluxe module.

Next, the process to upload a module, install it in a simple way and have fun with e-commerce taking advantage of your Prestashop Store is explained step by step.

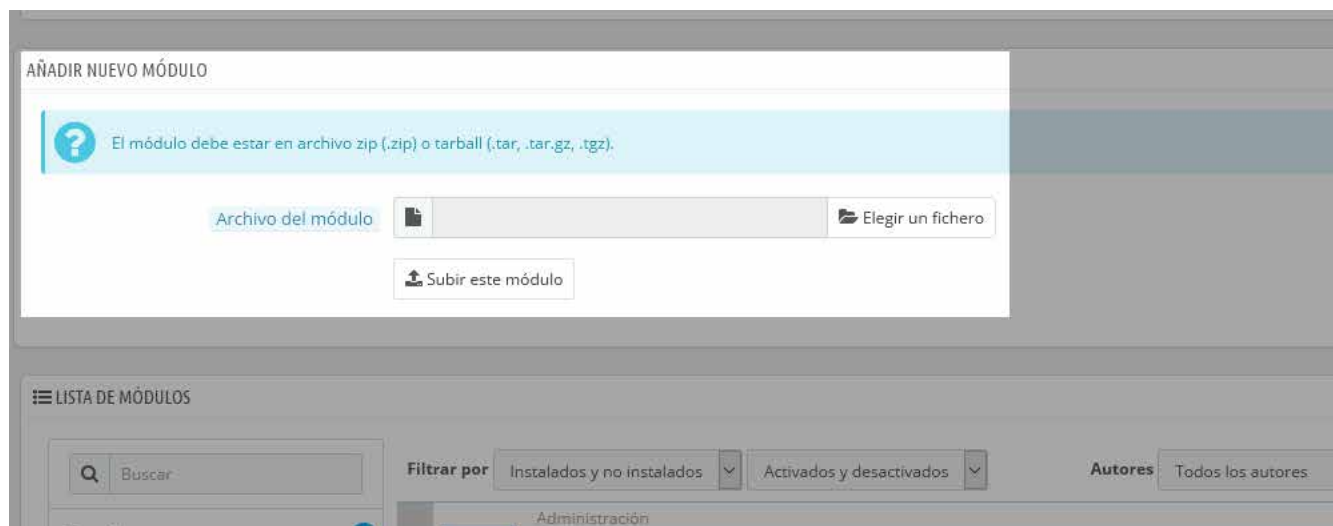

## How to UPLOAD THE MODULE

Pasos a seguir:

- 1) Download your purchased module.
- 2) In order to upload your module, you have two different options available: upload using a FTP client or directly from your Prestashop backoffice. We recommend to use a FTP client (like Filezilla). Uploading from your backoffice can cause file permissions problems on some servers.
  - A. If you are using a FTP client, first unzip the downloaded file . Once connected to your server by using a FTP client, search for the folder "modules" and upload the unzipped folder. The module is now uploaded to your shop. Later we'll explain how to install your new module.
  - B. If you are uploading your module using Prestashop backoffice, follow the next steps:
    1. In the module list available in your backoffice, search for a button called "Add new module" in the top right corner.

2. Click this button and you'll be asked to search for the module you want to upload.

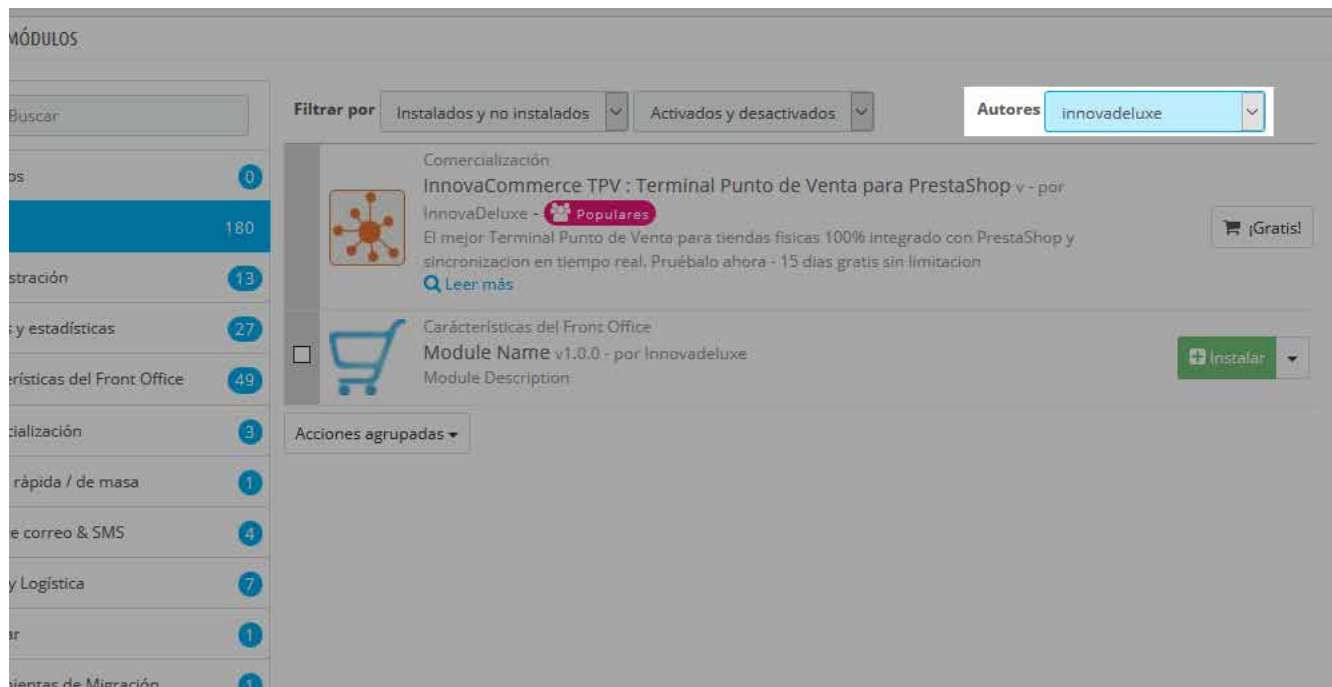

3. Once your new module is selected, just click the button to upload it. The next step is installation.

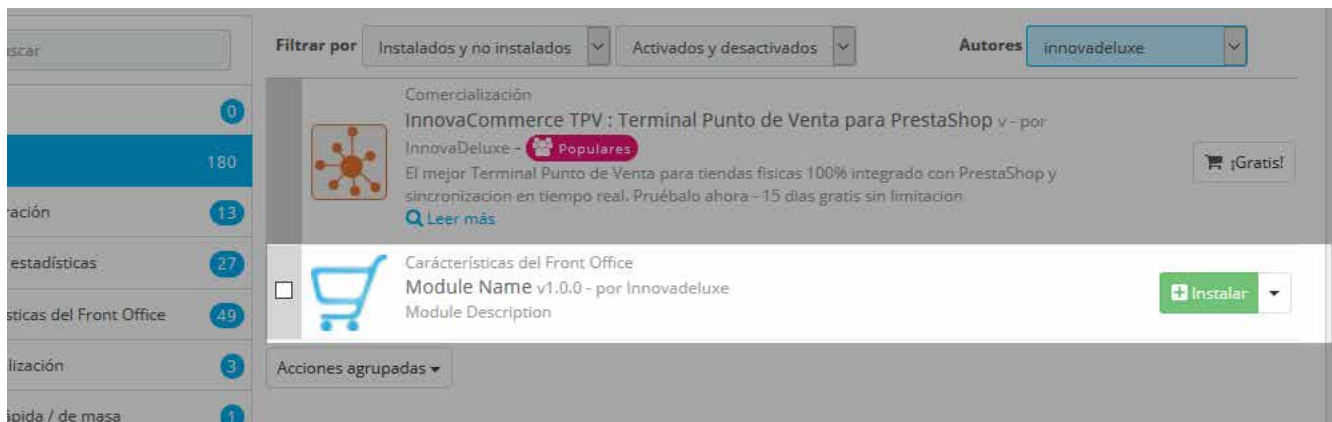

## How To INSTALL THE MODULE

Once your module is uploaded, it's the moment to install it, this step is easier than the previous one:

- 1) Browse to your backoffice, locate the section "Modules and Services" in your menu and the modules list will be displayed.
- 2) In this list, you can filter by author, search Innovadeluxe and automatically the list will be filtered displaying all the modules developed by Innovadeluxe.

- 3) Once located your new module, click the "Install" button.

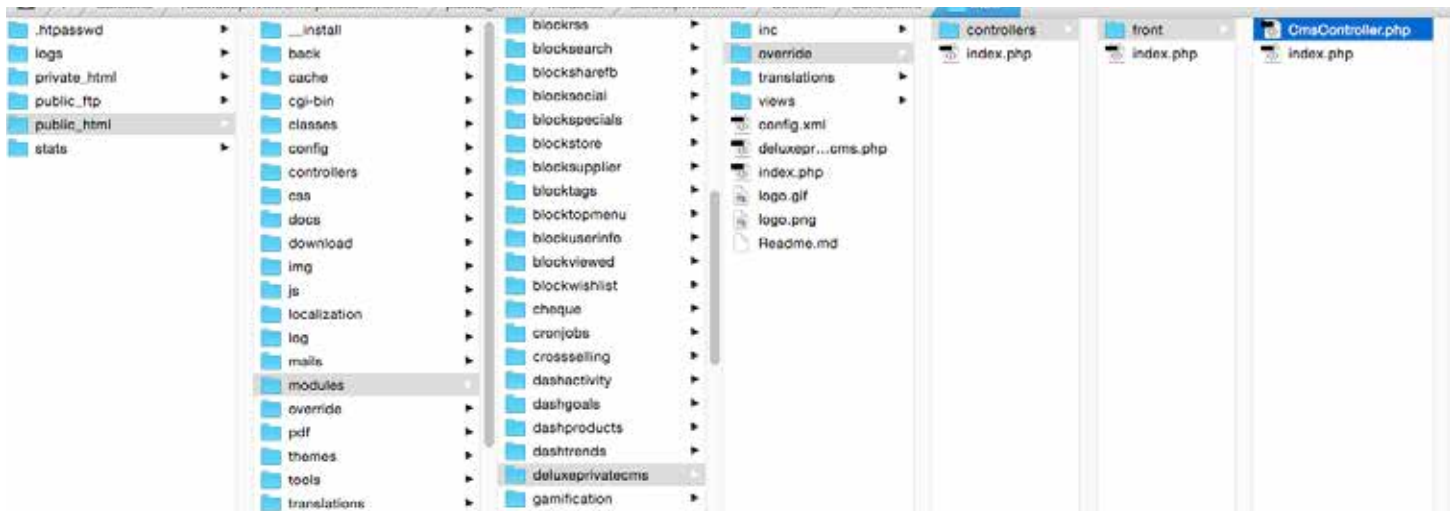

- 4) Then, you'll have to confirm the installation. Accept and the module will be installed in your shop.
- 5) Now you have to browse to section "Performance" in your store and clear cache. Once cleared, you'll be able to test the module.

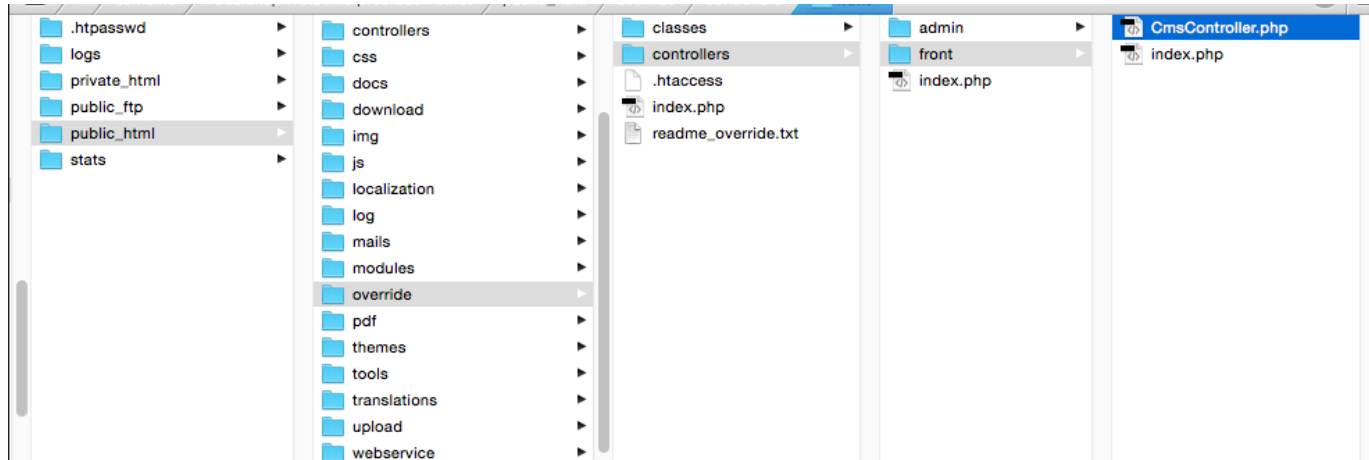

## ARE YOU HAVING ANY PROBLEMS WHILE INSTALLING?

- 1) If the module advises you about an override modified by another module and can not be copied to the folder "override", follow these steps:
  - A. Use your FTP client to access your shop. Search for the folder "Modules". Browse it and locate our module, then find the "override" folder inside the module. Browse the structure and search for the controller or class in the advice. Look the next Snapshot. But for each module, the name of the controller or class can change, to know the name of the controller or class, take a look to the module advice while installing. Once located, open it using notepad or any other text editor.

B. Now locate the "override" folder in your shop root folder and browse inside it to find the .php file with the same name than the one you opened first. Take a look to the next snapshot. Once located, open it with notepad or any other text editor.

C. Now you have to merge both files. Browse to the first file you opened, the module one and copy all the contents in the file except the part marked in the next capture. This way you'll copy all the method code and you'll be ready to paste into the second file you opened, the one in the override folder in the root of your shop.

```

11 */
12
13 class CmsController extends CmsControllerCore
14 {
15
16     public function initContent()
17     {
18         if (Module::isEnabled('deluxepivatecms') && Configuration::get('DELUXEPRIVATECMS_LICENSED') == true)
19         {
20             $deluxePrivateCms = Module::getInstanceByName('deluxepivatecms');
21             parent::initContent();
22             $id_cms = (int)Tools::getValue('id_cms');
23
24             $parent_cat = new CMSCategory(1, $this->context->language->id);
25             $this->context->smarty->assign('id_current_lang', $this->context->language->id);
26             $this->context->smarty->assign('home_title', $parent_cat->name);
27             $this->context->smarty->assign('home_title', $parent_cat->name);
28
29             $this->setTemplate(_PS_MODULE_DIR_.'/deluxepivatecms/views/templates/front/private.tpl');
30         }
31         else
32         {
33             $this->setTemplate(_PS_THEME_DIR_.'/404.tpl');
34         }
35     }
36 }
37
38 else
39 {
40     parent::initContent();
41 }
42
43 }
44
45 }
46
47 }
48
49 }
50
51 }
52
53 }
54
55 }
56
57 }
58
59 }
60
61 }
62
63 }
64
65 }
66
67 }

```

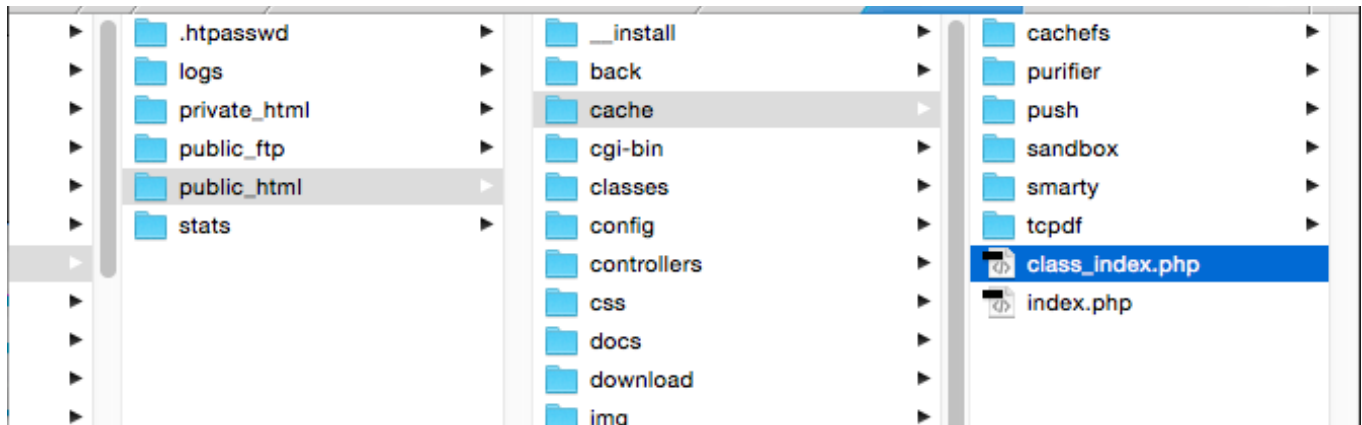

D. Open the second file and go to the bottom of the file and paste the code you copied before the last bracket. Ensure that it's before the last bracket, in other case, an error will be produced and the module will not work properly.

```

108     parent::initContent();
109 }
110
111 }
112
113
114
115
116 }
117
118

```

E. Once done the hard work is done. Search for the "cache" file in the root folder and inside it the file class\_index.php. Once located, remove it. This file will be automatically created again.

F. Now you can close your FTP client. Now you have to access to your backoffice to clear Prestashop cache, take a look to the next snapshot.

G. The module is installed, and ready to use. If you're having any problems with installation, please contact us. Follow the steps in the next point.

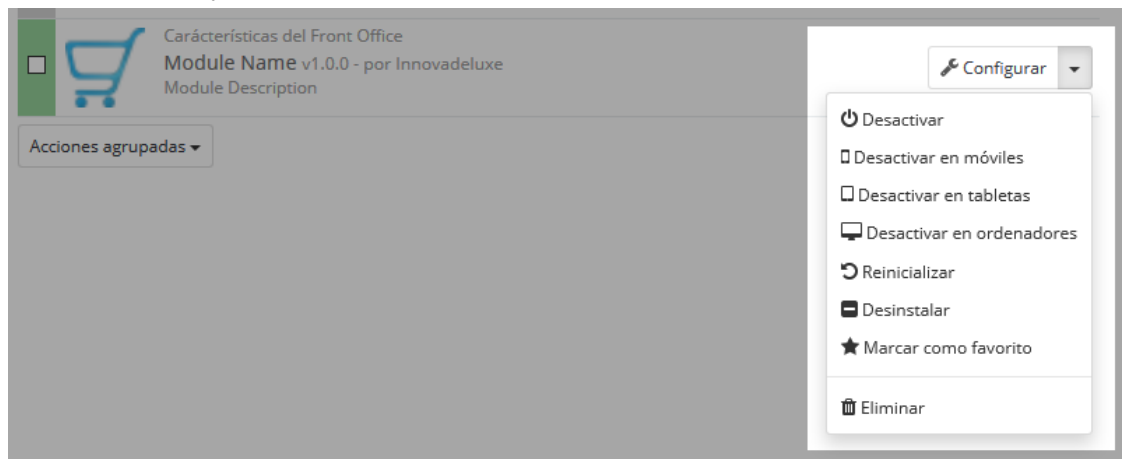

2) If you're having any problems while installing, please contact us and we'll help you. You'll have to provide us with the next informations:

- FTP access to your shop. We need access at least for "override" and "modules" folders.
- Access to you Prestashop backoffice. , we'll need access for modules, performance and catalogue or orders depending on the module, in order to test it.

If you're contacting us for the first time, please provide us us with this informations together with a clear explanation of your problem and all the process you followed, for us to locate it quickly and solve it immediately.

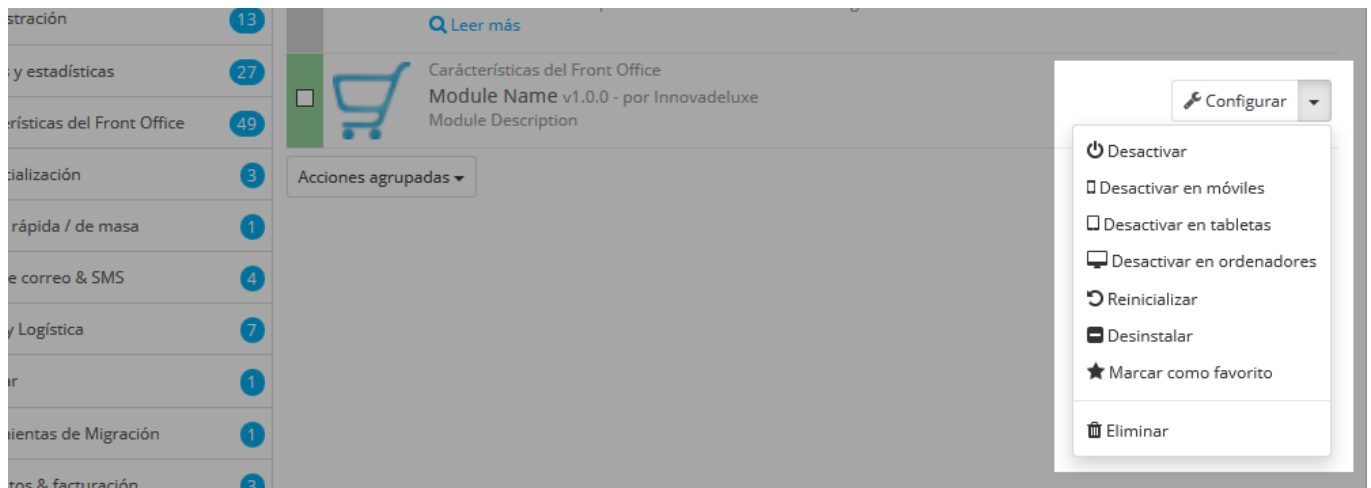

## How To UNINSTALL THE MODULE

If the module is useful no more for your store, you can uninstall it in a simple way. Just locate the module in the modules list and in the dropdown menu, on the right of the module name, select "Uninstall", accept, and that's it, the module is uninstalled. You can delete it if you want or need to.

## OTHER NOTES

As you can see, when clicking on the dropdown menu at the right of the module name, there are more options to apply to your module. Here is a explanation for each one:

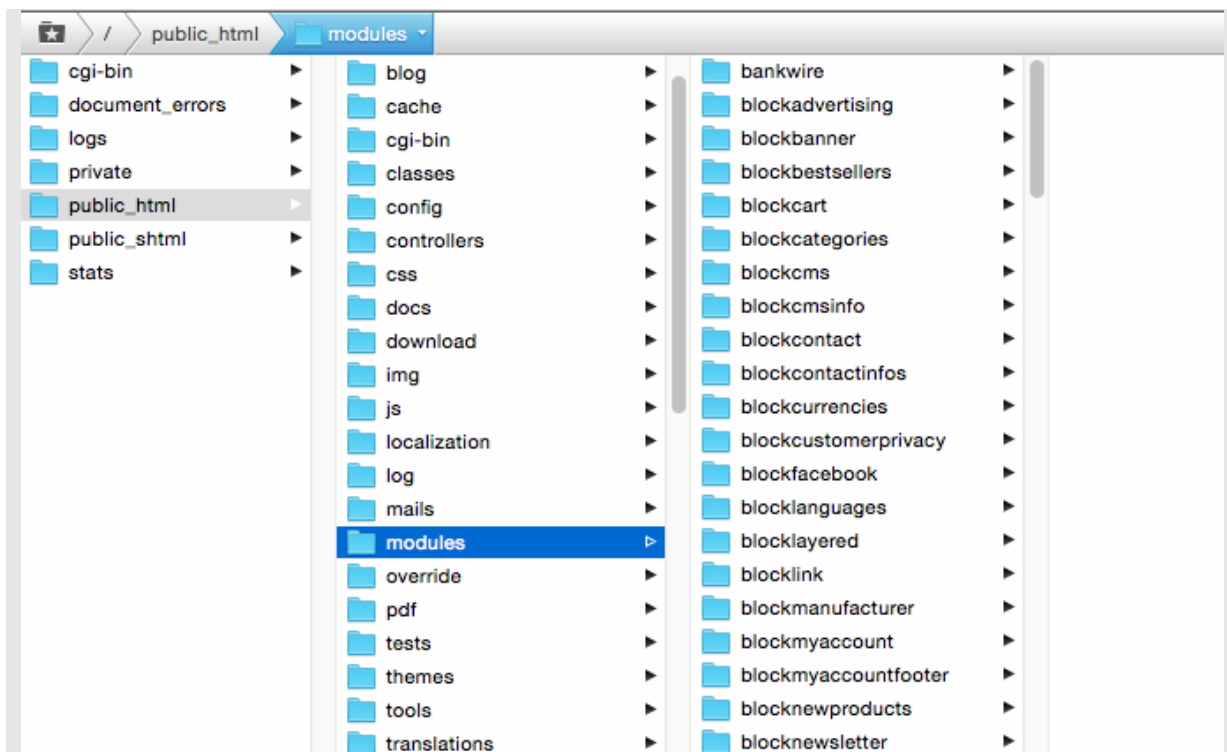

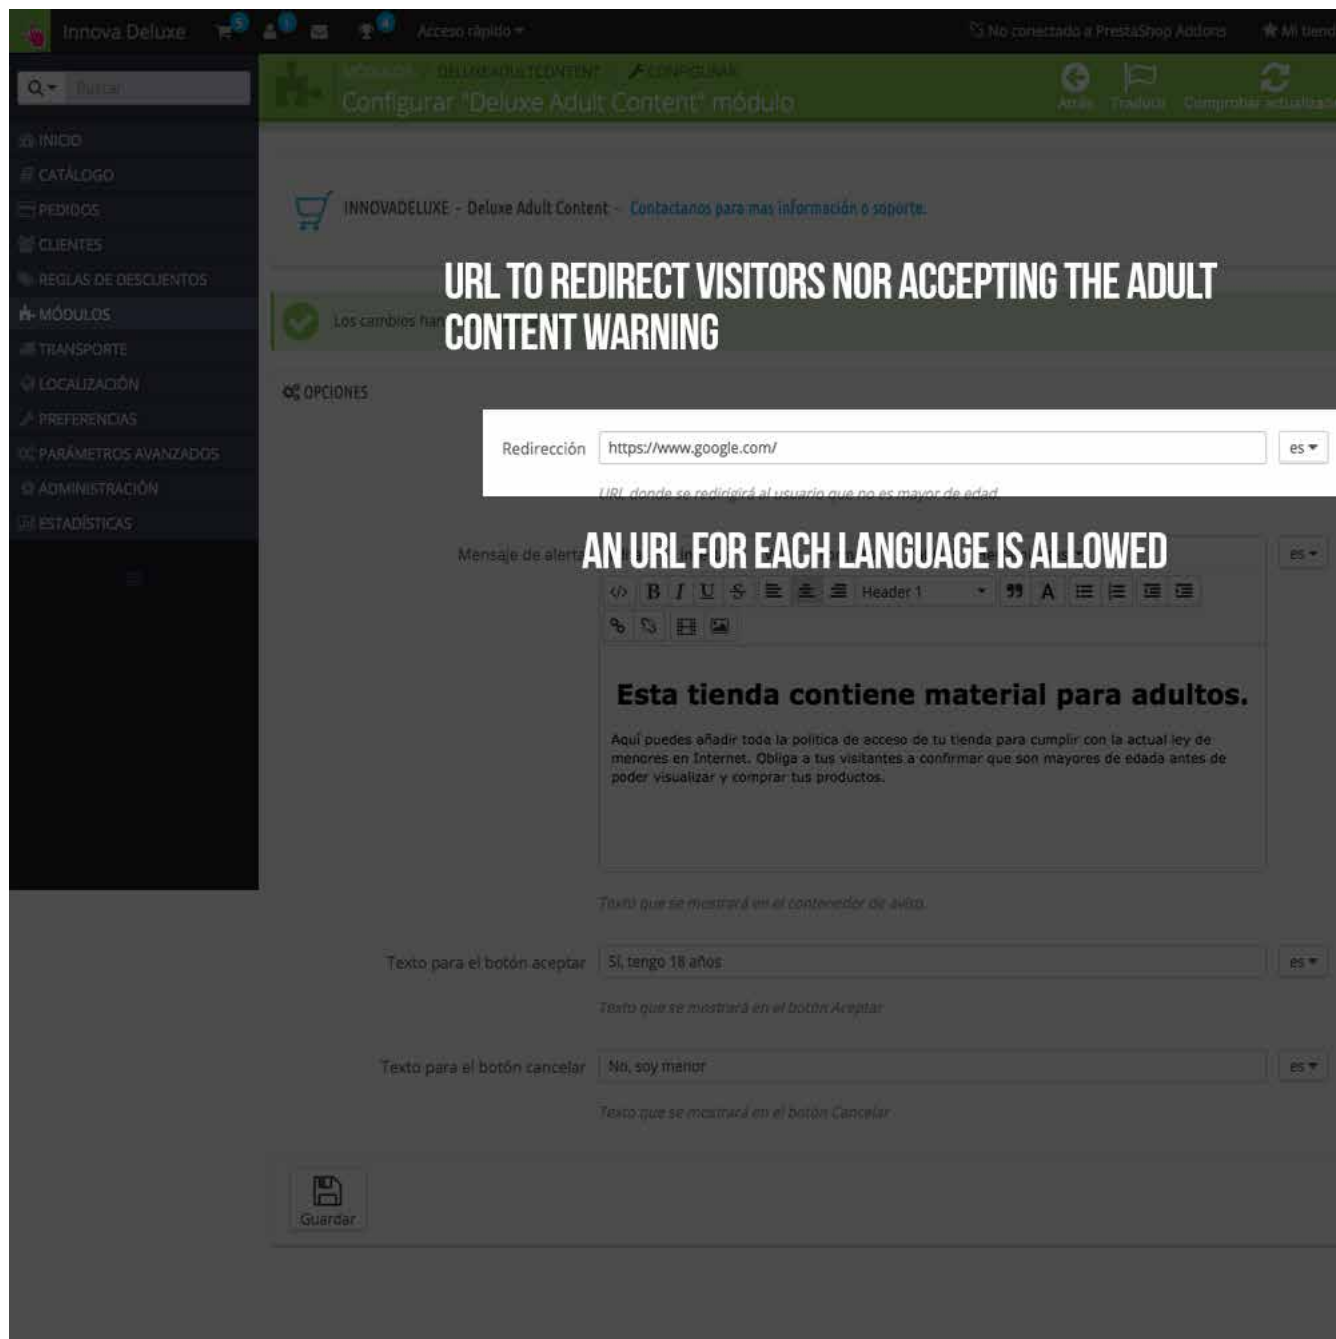

- **Disable:** This option disables the module, for example, if you're not going to use it for some time. You have not to uninstall, maintaining all your configurations for the module.
- **Disable for mobile devices:** When activating this option, the module will be disabled in the frontoffice for mobile devices.
- **Disable for tablets:** When activating this option, the module will be disabled in the frontoffice for tablets.
- **Disable for computers:** When activating this option, the module will be disabled in the frontoffice for computers.
- **Reset:** If you click this option, the module will be reinstalled, all configurations will be reset to their default values and all previous configurations will be lost, so be careful, use this option only if the module is not working properly.
- **Add to favorites:** By clicking this option, the module will be added to your favorite modules list.
- **Delete:** If you click this option, the module will be installed and deleted from your server.

## How to upgrade Innovadeluxe modules:

1. Use Prestashop maintenance mode (recommended)
2. Use your FTP client to access "modules" folder in your server, search for the module you want to update and then just rename the folder. For example, if folder is called "deluxeopd" you can rename it to "backup\_deluxeopd\_02\_feb\_2016", this way, you'll know when the update was done at any moment.
3. Now, unzip in your computer the module last version downloaded from your Innovadeluxe customer area and upload it to the "modules" folder in your server, you should not have any overwrite advice.
4. Once uploaded, just browse to the modules tab in your Prestashop store backoffice, search for our module, and configure it. The module should be updated and everything should be working correctly.
5. Then, browse to "Advanced parameters->performance" and clear your site cache.
6. At last, activate your store and ensure everything is working ok.
